The international scholarly journal of the International  
Input-Output Association (IIOA) [www.iioa.org](http://www.iioa.org)

Editor:  
Erik Dietzenbacher - *University of Groningen,  
The Netherlands*

**Economic Systems Research** is a double peer reviewed scientific journal dedicated to the furtherance of theoretical and factual knowledge about economic systems, structures and processes, and their change through time and space, at the subnational, national and international level. The journal contains sensible, matter-of-fact tools and data for modelling, policy analysis, planning and decision making in large economic environments. It promotes understanding in economic thinking and between theoretical schools of East and West, North and South.

The journal is non-partisan, factual and problem-oriented. As the official journal of the International Input-Output Association (IIOA), it aims to serve as a vehicle of cross-cultural information and contact. Topics within the purview of the journal include linear and non-linear multisectoral models of structure and structural change and development, ecosystems and the treatment of depletable resources, environmental and strategic questions, databases and databanks, large-scale computational methods and languages. The journal includes reviews of pertinent literature and special issues on new emerging areas of research in its field.
